Summary

Full Stack Developer with 4+ years building real-world software in production: portals serving **360+ active users**, admin tools, dashboards, and cross-system data export pipelines.

Currently leading the development team at the Cámara de Representantes de la Provincia de Misiones (Argentina) after guiding the area's adoption of Next.js + TypeScript + Prisma as the new standard from a monolithic PHP legacy system . Looking for a place where I can ship well-crafted code. Best fitting remote roles: web apps, e-commerce, or SaaS.

Experience

Cámara de Representantes de la Provincia de Misiones	Misiones, Argentina
Tech Lead · Full Stack Developer	2025 – Present

- Lead the development team: assigning tasks, setting priorities and deadlines, providing ongoing feedback.
- Drove the adoption of Next.js + TypeScript + Prisma as the area's new standard for development.
- Designed and shipped the Institutional Portal — in production with **360+ active users**: DNI-based authentication and per-system permission validation through independent adapters.
- Built a tutorials module that **cut the volume of basic internal support queries**.
- The adapter layer connects to every internal database, laying the groundwork for a future institution-wide AI.

Cámara de Representantes de la Provincia de Misiones	Misiones, Argentina
Web Developer	2021 – 2023

- Maintenance and evolution of internal PHP systems across multiple areas.
- Optimized query times and refactored visual interfaces to improve flow and usability on day-to-day workflows.
- Built administrative tools, calculation systems, data export pipelines between systems, institutional mini-games, and area-specific management modules.
- Developed and deployed a Python-based interface integrating web APIs with Arduino firmware to enable remote robot control. The system, along with a suite of custom-built mini-games, currently serves **200+ users weekly** in a production environment.

Projects

Institutional Portal

Next.js · TypeScript · Prisma · PostgreSQL

- **360+ active users** in production.
- Tutorials module that reduced the volume of basic internal support queries.
- ID-based authentication, no extra credentials needed.
- Per-system permission validation through independent adapters.
- Every internal Database connected through an adapter layer, ready for AI implementation.

Interactive Robot & Institutional Mini-games

Python · Arduino · REST API · IoT

- Real-time robot control via HTTP commands.
- Interactive app for manual control plus complementary web mini-games.
- Direct integration with Arduino firmware.
- In production since 2022, ~200 weekly users.
